Test your knowledge on converting and formatting data

GESAMTPUNKTZAHL 3

1. A spreadsheet cell contains the coldest temperature ever recorded in New Zealand: -22 °Celsius. What function could be used to display that temperature in Fahrenheit?

1 / 1 Punkten

- ☐ =CONVERT(-22, "F", "C")
- ☐ =CONVERT(-22, F, C)
- ☒ =CONVERT(-22, "C", "F")
- ☐ =CONVERT(-22, C, F)

✓ Richtig

=CONVERT(-22, "C", "F") will display -22 °C in Fahrenheit.

2. A data analyst wants to ensure spreadsheet tools continue to run correctly, even if someone enters the wrong data by mistake. Which data-validation menu option should they select?

1 / 1 Punkten

- ☐ Remove Validation
- ☐ Forbid Entry
- ☐ Deny Help Text
- ☒ Reject Invalid Inputs

✓ Richtig

To ensure spreadsheet tools continue to run correctly, even if someone enters the wrong data by mistake, select Reject Invalid Inputs.

3. A data analyst selects Text Is Exactly November from the Format Cells if drop-down menu. This turns cells orange that contain the word November. What spreadsheet tool is the analyst using?

1 / 1 Punkten

- ☐ Filtering
- ☒ Conditional formatting
- ☐ Data validation
- ☐ CONVERT

✓ Richtig

The data analyst is using conditional formatting. Conditional formatting is a spreadsheet tool that changes how cells appear when values meet specific conditions.
