Test your knowledge on exploring data visualizations

GESAMTPUNKTZAHL 4

1. What are the three basic visualization considerations? Select all that apply.

1 / 1 Punkten

☒ Subtitles

✓ Richtig

The three basic visualization considerations are headlines, subtitles, and labels.

☒ Headlines

✓ Richtig

The three basic visualization considerations are headlines, subtitles, and labels.

☒ Labels

✓ Richtig

The three basic visualization considerations are headlines, subtitles, and labels.

☐ Text

2. Directly labeling a data visualization helps viewers identify data more efficiently. Legends are often less effective because they are positioned away from the data.

1 / 1 Punkten

☒ True

☐ False

✓ Richtig

Directly labeling a data visualization helps viewers identify data quickly. Legends are often less effective because they are positioned away from the data.

3. In what ways can data analysts use alternative text to make their data visualizations more accessible?

1 / 1 Punkten

☒ To provide a textual alternative to non-text content

☐ To add context to the data visualization

☐ To make the presentation of data clearer

☐ To make data visualizations easier to read

✓ Richtig

Alternative text provides a textual alternative to non-text context. Alternative text ensures that users who need to access your data visualizations in different ways, like with a screen-reader, will still absorb the information.

4. You are creating a data visualization and want to ensure it is accessible. What strategies do you use to simplify the visual? Select all that apply.

1 / 1 Punkten

☒ Do not create overly complicated charts

✓ Richtig

Simplifying your data visualizations can help your audience understand and focus on the important data. To do this, avoid overly complicated visuals or unnecessary information.

☐ Do not include labels

☒ Do not include long chunks of text

✓ Richtig

Simplifying your data visualizations can help your audience understand and focus on the important data. To do this, avoid overly complicated visuals or unnecessary information.

☒ Do not include too much information

✓ Richtig

Simplifying your data visualizations can help your audience understand and focus on the important data. To do this, avoid overly complicated visuals or unnecessary information.
