## Test your knowledge on sorting in SQL

GESAMTPUNKTZAHL 2

1. A data analyst is writing a SQL query to sort data in a column in ascending order. The column is called *column\_title*. What is the correct syntax for their query?

1 / 1 Punkten

- ☐ ORDER column\_title ASC
- ☐ ORDER BY column\_title DESC
- ☒ ORDER BY column\_title
- ☐ ORDER column\_title

Richtig

An ORDER BY statement sorts in ascending order by default. ORDER BY column\_title is the syntax for this query.

2. You want to sort a spreadsheet of newly released young adult novels. Which statement sorts action novels by word count in descending order?

1 / 1 Punkten

☐ WHERE  
word\_count DESC  
ORDER BY  
genre = "Action"

☒ WHERE  
genre = "Action"  
ORDER BY  
word\_count DESC

☐ WHERE  
genre = "Action"  
SORT BY  
word\_count DESC

☐ ORDER BY  
genre = "Action"  
WHERE  
word\_count DESC

Richtig

The correct statement is:

```
WHERE  
genre = "Action"  
ORDER BY  
word_count DESC
```

The ORDER BY clause tells the database how to organize the data it returns.
