Test your knowledge on data validation

GESAMTPUNKTZAHL 3

1. The entire data-validation process takes place before you begin your analysis.

1 / 1 Punkten

- ☐ True
- ☒ False

✓ **Richtig**

The data-validation process takes place throughout your analysis. This process involves checking and rechecking the quality of your data so that it is complete, accurate, secure and consistent.

2. You're analyzing patient data for a health care company. During the data-validation process, you notice that the first date of service for some of the patients is later than the most recent date of service. Which type of data-validation check are you completing?

1 / 1 Punkten

- ☐ Data structure
- ☒ Data consistency
- ☐ Data type
- ☐ Data range

✓ **Richtig**

This is a check for data consistency. During a data consistency check, you confirm that the data makes sense in the context of other related data.

3. During analysis, you complete a data-validation check for errors in customer identification (ID) numbers. Customer IDs must be eight characters and can contain numbers only. Which of the following customer ID errors will a data-type check help you identify?

1 / 1 Punkten

- ☐ IDs in the wrong column
- ☒ IDs with text
- ☐ IDs with more than eight characters
- ☐ IDs that are repeated

✓ **Richtig**

Completing a data-type check will help you identify customer IDs that contain text. The data type for IDs should be numeric only.
