## Test your knowledge on unbiased and objective data

GESAMTPUNKTZAHL 2

1. Which of the following are examples of sampling bias? Select all that apply.

1 / 1 Punkten

An online marketing analytics firm stores data in a spreadsheet.

An election poll interviews 1,000 people with college degrees.

**Richtig**

A survey of high school students that does not include homeschooled students, an election poll that only interviews people with college degrees, and a clinical study that includes three times more men than women are not representative of the population.

A survey of high school students does not include homeschooled students.
